

AHMAD ARSHAD

Software Engineer — Full-Stack & AI/LLM-Integrated Applications

ahmedarshad260@gmail.com | +92 322 3809009 | Lahore, Pakistan | linkedin.com/in/ahmed-arshad-0404441b3 | github.com/ahmadarshad0911

SUMMARY

Software Engineer specializing in full-stack web development, CMS engineering, and Artificial Intelligence (AI)-integrated application development, complemented by prior e-commerce operations experience. Skilled across Python, PHP, JavaScript/TypeScript, and modern frameworks (Next.js, FastAPI), with hands-on experience designing and shipping full-stack systems that integrate Large Language Model (LLM) reasoning, generative AI features, secure authentication, and cloud deployment. Currently completing a Bachelor's degree in Computer Science. Proven ability to translate client and business requirements into scalable, secure, and user-focused digital solutions.

SKILLS

- Programming Languages:** Python, PHP, JavaScript, TypeScript, HTML, CSS
- Frameworks & Backend:** FastAPI, Next.js (React), REST Application Programming Interface (API) Design, SQLAlchemy, JWT & OAuth 2.0 Authentication
- AI Engineering:** Artificial Intelligence (AI) & Large Language Model (LLM) Integration, Prompt Engineering, Fallback-Chain Architecture, Reasoning Pipelines, Generative AI Features
- CMS & Web Development:** WordPress (Theme & Plugin Development, Custom Post Types), Responsive Design, SEO (On-Page & Technical)
- Tools & Platforms:** Git/GitHub, CI/CD (GitHub Actions), DigitalOcean, Vercel, Docker, SQLite/PostgreSQL, Google Analytics & Search Console
- QA & Core Competencies:** Manual & Functional Testing, Regression Testing, Bug Tracking, Cross-Team Collaboration, Requirement Analysis

PROJECTS

- Clarifyd — AI Legal Assistant for Startups** — Full-Stack Developer & Project Lead (Final Year Project) 2026
clarifyd.app
- Architected and built an AI-powered contract-risk-analysis platform end-to-end as lead/sole engineer — FastAPI/Python backend, Next.js/React/TypeScript frontend, SQLite data layer — enabling founders to upload a contract and receive real-time, AI-generated clause-level risk findings.
 - Designed and integrated the core AI reasoning pipeline: engineered prompts and response parsing for an NVIDIA NIM-hosted LLM (Llama 3.3 70B, swappable to Kimi K2.6) to perform clause-taxonomy detection and risk scoring, backed by an automatic fallback chain to a rules-based AI provider for guaranteed uptime.
 - Built a generative-AI "Smart Builder" copilot that drafts replacement contract clauses on demand, and an AI Findings interface presenting risky clauses, loopholes, and one-tap AI-suggested rewrites side-by-side with the original draft.
 - Hardened the AI system for production: added OAuth 2.0/JWT-gated access to reasoning endpoints, a hash-chained audit log of every AI call, and content-hash response caching to cut redundant LLM calls — then deployed and monitored the service (Prometheus) across DigitalOcean and Vercel.
- Bytescore — Cross-Platform Exam Preparation App** — QA Engineer 2026
bytescore.app
- Authored and executed 100+ test cases across Android and iOS, verifying reliability of practice tests, MCQ modules, and analytics features; identified and reported 40+ bugs prior to release.
 - Conducted regression testing across 5+ app updates, maintaining consistent user experience with minimal post-release defects.
- Pharmacy POS System** — Developer
pharmacy-pos-system.vercel.app
- Built a pharmacy point-of-sale system supporting 500+ SKU inventory tracking and billing workflows, streamlining 100+ daily transactions with a clean, user-friendly interface.

EXPERIENCE

- Software Engineer** — Sunsoft.pk, Multan, Pakistan 2024
- Engineered 8+ fully responsive WordPress websites, customizing themes and integrating 15+ plugins to align output with client branding and requirements.
 - Optimized on-page SEO and metadata structuring across client sites, contributing to an average 20–25% increase in organic search visibility.
- Software Engineer** — NMSoft Technologies, Multan, Pakistan 2023 – 2024
- Strengthened security posture across 10+ client sites through regular updates, backups, and vulnerability prevention; architected custom post types for 6+ WordPress projects.
 - Resolved 50+ PHP, HTML, CSS, and JavaScript issues, and configured Google Analytics/Search Console across multiple properties for performance monitoring.

EDUCATION

Bachelor of Science in Computer Science — NFC Institute of Engineering & Technology (NFC-IET), Multan, Pakistan 2022 – 2026
CGPA: 3.60 / 4.00
