ACADEMIC PROFILE

Final-year BS Computer Science student at NFC Institute of Engineering & Technology (NFC-IET), Multan, with a CGPA of 3.60/4.00 and a strong academic focus on Artificial Intelligence. Independently developed an LLM-integrated legal-assistance application, Clarify.app, as a Final Year Project, gaining practical experience across full-stack development, API design, and AI/LLM integration. Interested in pursuing graduate study in Artificial Intelligence or Computer Science, with a long-term academic interest in the risks and challenges posed by rapidly advancing AI systems and in practical approaches to building safer, more reliable AI.

RESEARCH INTERESTS

Areas of focus: Machine Learning, Deep Learning, Generative AI, Large Language Models (LLMs), AI-assisted systems, AI safety and responsible development

Long-term interest: Researching future AI risks and practical approaches to safer, more reliable AI systems

EDUCATION

NFC Institute of Engineering & Technology (NFC-IET)

BS Computer Science; CGPA: 3.60/4.00

Strongest academic subject area: Artificial Intelligence

Multan, Pakistan

Oct 2022 – Jul 2026

RESEARCH & FINAL YEAR PROJECT EXPERIENCE

Clarify.app (Clarifyd) — AI-Powered Legal Assistance Platform | [Live Demo](#) Final Year Project
Sole Developer: Full-Stack Development and AI Integration

- Early-stage founders often lack affordable, accessible legal review of contracts and company-filing requirements, and LLM-based analysis adds the further need for reliability and traceability.
- As sole developer, designed and built the full application: a Next.js, React, TypeScript, and Tailwind CSS frontend; a FastAPI backend with REST API endpoints and a SQLAlchemy 2.0 (async) database schema on PostgreSQL/SQLite for contract review and compliance workflows; Clerk authentication and OAuth 2.0; and the LLM reasoning pipeline via NVIDIA NIM (Llama-based models) with a rule-based fallback provider, rate limiting, and audit logging.
- Delivered a working, deployed application that analyzes uploaded contracts, surfaces clause-level risk findings with founder-friendly rewrite suggestions, and exports a redlined draft, keeping the review workflow available when the primary model is unavailable.

SELECTED ACADEMIC / TECHNICAL PROJECTS

Auto Job Bot | [GitHub](#)

Independent Project (In Progress)

- Job searching requires discovering openings and tailoring a resume and cover letter for each one, which is slow to do manually.
- Built a Python and FastAPI application that parses uploaded CVs into structured profiles, scores and tailors resumes against job descriptions, and generates cover letters from text or a job-description screenshot using LLMs through the Groq API, with Playwright, BeautifulSoup, SQLite, and ReportLab supporting job discovery, tracking, and PDF output.
- Delivered a working local application with a FastAPI interface and browser dashboard, currently being refined ahead of production deployment.

Pharmacy POS System | [Live Demo](#)

Independent Project

- Pharmacies need fast checkout and reliable tracking of inventory and sales.
- Built a responsive point-of-sale web application with product and inventory management and a cart-and-checkout workflow, using HTML, CSS, and JavaScript.
- Delivered a working, deployed application with receipt printing optimized for thermal printers.

EMC Veritas | [GitHub](#)

Co-Developer, Pair Project

- The Event Management Club (EMC) at NFC-IET Multan needed a digital way to issue certificates, record leadership recognition, and let others verify them.

- Working with a project partner, owned the admin-facing frontend, including the admin shell, activities and student management, data imports, session handling, and authentication UX/routes, using React, TypeScript, and Vite alongside a FastAPI and Supabase PostgreSQL backend with GitHub Actions verification checks.
- Delivered a certificate, leadership-recognition, and public verification portal, deployed on Cloudflare Pages and Render.

Bytescore.app | [Website](#)

Co-Developer, Pair Project

- A cross-platform exam-prep application had to work reliably on both Android and iOS across successive releases.
- Co-built the application with a project partner, authoring 100+ test cases across both platforms and running regression testing across 5+ releases.
- Reported 40+ bugs, improving release quality across the 5+ tested releases.

TECHNICAL & RESEARCH SKILLS

Programming Languages: Python, JavaScript, TypeScript, PHP

AI / LLM Integration: LLM integration via OpenAI-compatible APIs, multi-provider fallback design

Backend Development: FastAPI, Node.js, RESTful API design, SQLAlchemy, Pydantic

Frontend Development: Next.js, React, HTML5, CSS3, Tailwind CSS

Databases: PostgreSQL, MySQL, SQLite

Authentication & APIs: OAuth 2.0, JWT-based authentication, REST APIs

Testing & Quality: pytest, manual and regression testing

Tools & Version Control: Git, GitHub, GitHub Actions (CI), Docker, Vercel

ACADEMIC LEADERSHIP & UNIVERSITY ACTIVITIES

Event Management Club (EMC)

Multan, Pakistan

Media Head

NFC Institute of Engineering & Technology (NFC-IET)

- Coordinated media coverage and led media-related responsibilities for university events.
- Contributed to planning and execution of university-wide events, including a Water Filtration Plant Initiative, a campus clean-up drive, seminars, Sports Week, and a plantation drive.
- Supported team and event coordination across multiple university activities.

SCHOLARSHIPS / AWARDS

NFC-IET University Scholarship: Awarded a 50% waiver of tuition/semester fees at admission, based on merit calculated from Intermediate examination marks (947).

CERTIFICATIONS

Amazon Bedrock Getting Started

Apr 2026

AWS Training & Certification (Completion Certificate)

PROFESSIONAL EXPERIENCE

Sunsoft.pk

Multan, Pakistan

Software Engineer

2024

- Client projects required responsive websites with extended plugin-based functionality.
- Developed WordPress websites with responsive layouts and integrated third-party plugins.
- Delivered client-ready websites with the requested functionality.

NMSoft Technologies

Multan, Pakistan

Software Engineer

2023 – 2024

- Client WordPress sites needed stronger security and content structures tailored to each project.
- Applied security hardening measures and built custom post types and functionality across multiple projects.
- Delivered more secure sites with tailored content management for clients.
